JOURNAL OF APPLIED ELECTROCHEMISTRY 13 (1983) 815–819

Indexes to Volume 13 (1983)

The subject index has been organized into topics for easy reference.

Subject index

Batteries fuel and solar cells

Studies concerning charged nickel hydroxide electrodes. VI. Voltammetric behaviour for pre-cycled electrodes, 27
Studies concerning charged nickel hydroxide electrodes. VII. Influence of alkali concentration on anodic peak positions, 89
Studies concerning charged nickel hydroxide electrodes. VIII. The relative potentials of the β/γ–nickel oxy hydroxide reduction processes, 97
Morphology of $PbSO_4$ formed on solid Pb in concentrated sulphuric acid: a note pertaining to a recent paper, 103
Melting-crystallization properties of the sulphur electrolyte in sodium–sulphur batteries, 121
The impedance of the alkaline zinc–manganese dioxide cell. III. The identification of a state-of-charge test, 217
The role of sintering time on reversibility of Ni(s)–NiO(s) electrodes for high temperature solid oxide electrolyte galvanic cells, 221
A state-of-charge test for the Li–CuO cell, 351
The technology of the Li/Cl_2 in SO_2Cl_2 cell system. IV. High temperature performance, storability, and safety characteristics, 439
The technology of the Li/BrCl in $SOCl_2$ inorganic battery system: performance and self-discharge characteristics following long-term storage, 451
The prediction of the state-of-charge of some commercial primary cells, 577
The impedance of the lithium–thionyl chloride primary cell, 669
A new lead acid cell concept for traction applications, 693

Corrosion

A hybrid method through faradic rectification and a.c. impedance measurements for the corrosion rate determination of metal/oxide/electrolyte systems. I. Theory, 157
Le monofluorophosphates de zinc et de potassium en tant qu'inhibiteurs de la corrosion d'un acier au carbone en solution de NaCl a 3%, 317
Corrosion and polarization characteristics of zinc in battery electrolyte analogues and the effect of amalgamation, 623
Tungstate induced corrosion of some aluminium alloys in acidic chloride solution – An approach for controlling it with morpholine, 807

Electrochemical engineering, studies of mass transport, reactor design

The rotating cylinder electrode: a review of development, 3
The incremental ohmic resistance caused by bubbles adhering to an electrode, 87
The effect of electrode material resistance on potential distribution in disc electrode cells, 209
Mass transfer from cylinders rotating in Newtonian fluids and dilute polymer solutions, 289
Test cell simulating the operating conditions of water electrolysers for the evaluation of gas evolving electrocatalysts, 371
Effect of radial diffusion on the polarization at porous flow-through electrodes, 417
Effect of flow rate and constant operating current on the behaviour of a recirculating electrochemical reactor system, 507
Energy consumption of aluminium smelting cells containing solid wetted cathodes, 569
Frictional pressure drop of pure and contaminated bubble-electrolyte dispersions in electrochemical reactors, 705
The role of diffusion on the performance of porous electrodes, 709

Electrochemistry of minerals

Mineralogical and electrochemical stability of the nickel–iron sulphides–pentalandite and violarite, 253
Reduction of chalcopyrite with copper (I), 411

Electrode kinetics, electrocatalysis

The effect of arsenic on the hydrogen evolution reaction on titanium, 169
Anodic characteristics of amorphous ternary palladium–phosphorus alloys containing ruthenium, rhodium, iridium, or platinum in a hot concentrated sodium chloride solution, 295
Transition metal catalysts for porous carbon air-electrodes in neutral chloride electrolytes, 337
Cyclic voltammetry of group VIII metals in cyanide melts, 383
Electrochemical production of heterogeneous nickel catalysts for organic hydrogenations, 403
On the microstructure of teflon-bonded platinum–carbon electrodes, 549
The estimation of the charge transfer resistance by graphical analysis of inclined semicircular complex impedance diagrams, 803

Electrode and cell materials

Electrochemical properties of graphite fibre/epoxy composite electrodes, 73
The electrochemical formation of graphite-bisulphate intercalation compounds, 147
Chemical and electrochemical oxidation of copper in dielectric millimeter waveguide tubes, 177
The operation of long-life anodes in amalgam cells, 341
X-ray photoelectron spectra and electrochemical properties of imidazol-linked iron phthalocyanine carbon electrode systems, 355
Corrosion of oxide-coated titanium (DSA) anodes in organic solvents (especially methanol), 459
Studies of phenolic resin-based microporous separator materials, 619

Electrowinning, Electrorefining

Zinc electrowinning from aqueous chloride electrolyte, 39

Instrumentation, techniques

Sulphur potential measurements with a two-phase sulphide–oxide electrolyte, 55
Galvanic cell-type humidity sensor using high temperature-type proton conductive solid electrolyte, 365
Hysteresis effects with ZrO_2 oxygen sensors exposed to non-equilibrium oxygen–hydrocarbon mixtures, 395
Current mode operation: a technique for improving the reliability of zirconia oxygen probes in reducing atmospheres, 519
A novel electrochemical method for visual detection of surface inclusions in metallic substrates, 689

Metal deposition, surface finishing

Scale-up of the deposition-threshold voltage in the electrodeposition of bright chromium, 69
Effect of 2-mercaptoethanol on the electrodeposition of lead, 111
A potentiodynamic study of anodic film formation on nickel in borate solutions, 135
The electrochemical study of a chromium plating bath. I. Reactions leading to solution-free species, 235
The electrochemical study of a chromium plating bath. II. Chromium metal and surface film formulation, 245
Electrophoretic painting, 269
The electrodeposition of silicon in fluoride melts, 277
Aspects of the deposition of nickel on iron powder in a fluidized bed, 325
Nodulation of electrodeposited copper due to suspended particulate, 429
Robotic electroplating of gold on quaternary semiconductors, 531
Electrochemical aspects of the codeposition of gold and copper with inert particles, 541
Coelectrodeposition of aluminium and cadmium from aqueous sulphate solutions, 565

Concentration dependence of the morphology of electrodeposits and a criterion for the morphological change of copper electrodeposits, 611
Electroplating of Fe–Ni alloys: a sulphate–amine bath, 679
Studies concerning the growth of cadmium dendrites. I. Morphology in alkaline media, 751
Studies concerning the growth of cadmium dendrites. II. Morphology in acidic media, 765
The mechanism of spongy electrodeposits formation on inert substrate at low overpotentials, 775
An investigation of the deposition and reactions of sulphur on gold electrodes, 783

Organic and inorganic electrosynthesis, electropolymerization

Coproduction of sulphuric acid and hydrogen by sulphur-assisted water electrolysis process, 23
Electroinitiated polymerization of methyl methacrylate in two phase media, 105
Electrochemical production of ceric sulphate in concentrated H_2SO_4, 117
High efficiency hypochlorite generation, 307
Water desalting by means of electrochemical parametric pumping. I. The equilibrium properties of a batch unit cell, 473
Water desalting by means of electrochemical parametric pumping. II. Separation properties of a multistage column, 489
Electrogeneration of Mn(III) in an undivided cell, 535
Electrosynthesis in systems of two immiscible liquids and a phase transfer catalyst. III. Characterisation of thin film contactor cells, 593
Electrosynthesis in systems of two immiscible liquids and a phase transfer catalyst. IV. Electrosynthesis using thin film contactor cells, 603
The economic evaluation of the electrochemical *o*-nitrotoluene/*o*, *o*-azoxytoluene reduction process, 637
Selectivity in the electrochemical epoxidation of propylene, 651
The indirect electrochemical epoxidation of butenes and ethylene in a bipolar trickle tower, 657
A new electrochemical technique for bleaching cellulose pulp, 663
Electroreduction of cyclohexanone oxime, 731
Electrosynthesis in systems of two immiscible liquids and a phase transfer catalyst. V. The anodic chlorination of naphthalene, 735

Electroforming, electrochemical machining

Electrochemical saw using pulsating voltage, 795

Solid state electrochemistry, oxide films

Self-stabilizing mount for impedance measurements of solid electrolytes – with special applications to beta-alumina ceramics, 79
Dielectric loss of beta-alumina polycrystalline ceramics of low NaO contents in 30–200 MHz band, 183
Decomposition of β-alumina in an oxygen potential gradient, 469
Influence of SO_2 on the electrolytic domain of yttria stabilized zirconia, 587
Polycrystalline In_2O_3 and In_2O_3/Y_2O_3 photoanodes, 377

Miscellaneous

Determination of equilibrium silver sulphate concentration in the system $Cu–H_2SO_4–CuSO_4–H_2O–Ag_2SO_4–Ag$ as a function of composition, 173
pH changes at near-electrode surfaces, 189
Magnetoelectrolysis, 553
Absorption of CO_2 by alkaline electrolyte and its effect on electrical discharge, 725
Photoelectrochemical reactions of FeS_2 (pyrite) with H_2O and reducing agents, 743
